

POISONING GUIDELINES

TVM UK has developed two new antiparasiticide-related guidelines to help vets deal with intoxication from pyrethrins and macrocyclic lactones. Both intoxications are commonly associated with severe neurological symptoms, it says. The easy-to-follow guidelines aim to offer clear, concise advice on treating animals with suspected or confirmed intoxications and complement TVM UK's current comprehensive set of free poisoning guidelines. They can be downloaded free from www.tvn-uk.com/vet-resource-library
